PROFESSIONAL SUMMARY

Senior .NET Full Stack Developer with **5+ years** of experience building **enterprise web applications** end to end on **.NET 8 / ASP.NET Core, C#, React.js, and TypeScript**. Designs and secures **RESTful Web APIs** and integrates them with **React** and JavaScript front ends, backed by **SQL Server** data models and tuned T-SQL. Builds reusable React components, forms, and client-side validation, and delivers end to end — requirement analysis, component and API design, code reviews, deployment, and post-go-live support — on procurement, vendor, and supply chain platforms handling high daily transaction volumes. Also maintains established **ASP.NET MVC 5** and **jQuery** modules and supports **EF Core migrations and release deployment**. Works as **Technical Lead** in an **Agile/Scrum** team — task breakdown, estimation, design discussions, and mentoring — using **AI tools** such as Claude Code and ChatGPT for faster delivery and stronger code review.

TECHNICAL SKILLS

Frontend (Modern): React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Bootstrap 5, Component-Based UI, Reusable Components, Forms & Client-Side Validation, State Handling, REST / JSON Integration, Responsive Web Design

Frontend (Server-Side): ASP.NET MVC Razor Views, jQuery, AJAX, DevExtreme, Dynamic UI Grids

Backend: C#, .NET 8 / ASP.NET Core 8, ASP.NET MVC 5, .NET Framework 4.8, RESTful Web APIs, Entity Framework Core 8, Entity Framework 6, LINQ, ADO.NET, Dependency Injection, SOLID, Design Patterns, Swagger / OpenAPI, Postman, Hangfire

Database: SQL Server, T-SQL, Stored Procedures, Views, Triggers, Query Optimization, Indexing, EF Core Code-First Migrations, Schema & Data Migration Scripts, Rollback Scripts, Backup & Restore, Environment Refresh with Data Masking & Validation

Cloud & DevOps: Git, Azure DevOps, TFS, IIS Hosting & Administration, Windows Server, SSL / TLS, Release & Deployment Management, ELMAH, log4net

Security & Integration: OWASP Top 10, JWT Authentication, ASP.NET Identity, Role-Based Access Control (RBAC), XSS / CSRF Prevention, Parameterized Queries, SAP Business One Integration, SMTP Services, Excel Bulk Upload, DevExpress, Crystal Reports

Practices & AI: Agile / Scrum, Sprint Planning, Estimation, Code Reviews, Clean Code, Requirement Analysis, Mentoring, Claude Code, ChatGPT, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Senior .NET Full Stack Developer & Technical Lead

Apr 2023 – Present

Spark IT Tech — Tiruppur, Tamil Nadu

- Build and maintain **enterprise web applications** end to end on **.NET 8 / ASP.NET Core, ASP.NET MVC 5, and C#**.
- Develop the **React.js** front end for the Vendor Portal — reusable form, grid, and modal components with client-side validation and state handling.
- Integrate React applications with RESTful .NET APIs** — JWT-secured endpoints documented in Swagger, with consistent validation and error handling on both sides.
- Build responsive server-rendered screens with **JavaScript, jQuery, AJAX, and Bootstrap** across established MVC modules.
- Design **SQL Server** schemas and tune **T-SQL stored procedures and indexes** for high-volume transactional modules.
- Act as **Technical Lead** — task breakdown, estimation, design discussions, **code reviews**, and mentoring juniors on .NET, React, and secure coding practices.
- Resolved **500+ security issues/findings** related to **XSS, SQL Injection, and CSRF** on a live production system without business downtime.
- Support releases with **EF Core migrations**, data and rollback scripts, and Production → UAT / Dev refreshes using **data masking and validation** of sensitive fields.
- Deploy IIS releases in **scheduled off-peak windows with pre-tested rollback scripts** and post-deployment validation, then support QA, UAT, and business teams after go-live.
- Use **Claude Code and ChatGPT** for AI-assisted development and code review across the team.

.NET Full Stack Developer

Aug 2021 – Mar 2023

Spark IT Tech — Tiruppur, Tamil Nadu

- Developed procurement and inventory modules on **ASP.NET Core and ASP.NET MVC 5** for high-volume daily transactions.
- Built **RESTful Web APIs** secured with JWT authentication, versioning, and Swagger documentation.
- Built frontend screens with **JavaScript, jQuery, and Bootstrap**, using AJAX to load and submit data without page reloads.
- Tuned **T-SQL stored procedures and indexes** to bring high-traffic screens to sub-second response times.
- Created Excel bulk upload modules with row-level validation and SAP sync logic.
- Set up **Hangfire** background jobs with retry and monitoring for long-running tasks.
- Ran database migration and patch scripts for each release along with matching rollback scripts.

KEY PROJECTS

Vendor Portal | Full Stack Developer (React + .NET)

React.js, TypeScript, JavaScript (ES6+), Bootstrap, C#, ASP.NET Core, RESTful Web APIs, Entity Framework Core, SQL Server, ASP.NET Identity, JWT

- Built the vendor-facing UI in **React.js with TypeScript** — a **reusable component set** (forms, grids, modals, validation) shared across registration, onboarding, and approval screens.
- Implemented **multi-step vendor registration and onboarding forms** in React with client-side validation, file upload, and inline error handling mapped to server-side validation rules.
- **Integrated the React front end with RESTful .NET APIs** using JWT authentication and role-based routing, so vendors, buyers, and approvers each see only their permitted screens.
- Delivered reporting screens for purchase orders, invoices, and vendor activity with server-side paging and filtering for large data sets.
- Streamlined **communication, procurement, and collaboration** with suppliers through a single self-service portal, replacing email-driven follow-ups.

Enterprise Supply Chain & Procurement System | Technical Lead

C#, ASP.NET Core, ASP.NET MVC 5, RESTful Web APIs, Entity Framework, SQL Server, JavaScript, jQuery, Bootstrap, JWT, IIS

- Built a multi-module **enterprise application** for procurement, inventory, and supply chain operations.
- Designed the **RESTful Web API** layer with JWT authentication, versioning, and Swagger documentation.
- Built the dynamic server-rendered UI in **JavaScript and jQuery** — AJAX grids, cascading dropdowns, and modal forms.
- Led the module as **Technical Lead** — task breakdown, design discussions, estimation, and code reviews.

Smart Documents — Invoice & Document Management | Full Stack Developer

C#, ASP.NET MVC 5, RESTful Web APIs, Entity Framework 6, ADO.NET, SQL Server, ASP.NET Identity, DevExtreme, JavaScript, jQuery

- Built a configurable document engine so new document types can be added without code changes.
- Delivered **SAP Business One integration** for invoice and vendor master data.
- Fixed 65 **code review** issues across 37+ files and reduced database round-trips by around 50%.

SAP Synchronization Services | Backend Developer

C#, ASP.NET Core, RESTful Web APIs, Hangfire, SAP Business One, SQL Server

- Built SAP sync services from scratch using **Hangfire** for near real-time data exchange.
- Automated two-way data flow, removing manual reconciliation between teams.
- Added retry, failure alerts, and monitoring so failed jobs recover automatically.

Database Migration & Release Management | Release / Deployment Engineer

SQL Server, T-SQL, EF Core Migrations, IIS, Windows Server, Azure DevOps, Git

- Handle **EF Core migrations**, schema and data migration scripts with matching rollback scripts, and Production → UAT / Dev refreshes with **data masking and validation**.
- Manage IIS hosting and SSL setup, and deploy releases in scheduled off-peak windows with pre-tested rollback and post-deployment validation.

KEY ACHIEVEMENTS

- Delivered the **Vendor Portal front end in React.js**, replacing email-driven vendor follow-ups with a self-service portal used by suppliers, buyers, and approvers.
- Built a **reusable React + TypeScript component set** (forms, grids, modals, validation) that cut build time for new vendor screens and kept UI behaviour consistent across the portal.
- Resolved **500+ security issues/findings** related to XSS, SQL Injection, and CSRF on a live enterprise platform, aligning it with **OWASP Top 10**.
- Achieved **sub-second response times** on high-volume modules through T-SQL and index tuning.
- Built **SAP Business One integration** from scratch, removing repeated manual reconciliation work.
- Delivered production releases in planned windows with pre-tested rollback scripts, **meeting agreed SLA commitments**.

EDUCATION

Bachelor of Engineering (B.E.) — Electrical & Electronics Engineering

2016 – 2020

Karpagam College of Engineering — CGPA: 7.5 / 10

Languages: Tamil (Native / Bilingual) | English (Professional Working Proficiency)
